CodeIgniter 3 - Basic CRUD application with MySQL Example ...
CodeIgniter is a web working environment for the development of web applications in PHP, that helps with writing in the source code and reduces the time required to complete things. It is based on the model view controller system. One of the most interesting characteristics of CodeIgniter is the large number of classes that are included for working with different objects: calendar, database, email, image editing, FTP, language, tables, sessions, ZIP compression, etc.

CodeIgniter - Wikipedia
CodeIgniter is a powerful PHP framework with a very small footprint, built for developers who need a simple and elegant toolkit to create fully-featured web applications. Get started with CodeIgniter 3 today!

Getting started - CodeIgniter 3 Basics | Pluralsight ...
Community Auth. This current version of Community Auth is an authentication package for CodeIgniter 3. If you 're looking for the older version for CodeIgniter 2, the repository (no longer maintained) is still available on Bitbucket. As a CodeIgniter third party package, Community Auth is now more easily integrated with your existing application. Full installation can be done in minutes, and authenticating a user is identical to the older version.

Codeigniter 3 Authentication - Community Auth
1) First, open the database.php file inside /codeigniter3/application/config/database.php and change the MySQL hostname, username and password as per your database server configuration: \$db['default'] = array('dsn' => "", 'hostname' => 'localhost' //change this as per your server.
