~~What is Earned Value Management (& How EVM Works?)~~

Earned Value Management (EVM): This methodology measures project performance with an integrated schedule and budget, which is based on the project work breakdown structure (WBS). Earned Valued Management System (EVMS): This is the collection of tools, templates , processes and procedures that an organization uses to do EVM.

~~Using Earned Value Management to Measure Project Performance~~

Earned Value Management (EVM) helps project managers to measure project performance. It is a systematic project management process used to find variances in projects based on the comparison of worked performed and work planned. EVM is used on the cost and schedule control and can be very useful in project forecasting.

Key benefits of Earned Value Management. Earned value management is easy to understand. It simplifies project management. Just by focusing on a handful of ratios project stakeholders can check the health of their projects. It is scalable. Earned value management can be applied at a project level, program level and even at a portfolio level.

~~Application of Earned Value Management in Project management~~

The Earned Value Management (EVM) and the Critical Path Method (CPM) are widely accepted methods and are often used simultaneously to evaluate project performance. The common practice is to use EVM to evaluate the status of project cost and forecast the project's cost at completion while using CPM to evaluate the status of project schedule and forecast the project's completion time.

~~The earned schedule—Project Management Institute~~

We then focus on the new EVM calculations as presented in A Guide to the Project Management Body of Knowledge (PMBOK® Guide)—Fourth Edition. Using two scenarios from a case study, we explore the new To-Complete-Performance-Index (TCPI) calculations and suggest how it can be used to calculate cost overruns practically.
