Elementary Differential Equations with Boundary Value Problems integrates the underlying theory, the solution procedures, and the numerical/computational aspects of differential equations in a seamless way. For example, whenever a new type of problem is introduced (such as first-order equations, higher-order equations, systems of differential equations, etc.) the text begins with the basic existence-uniqueness theory.

For example, if  $y = Ce^{kt}$ , then  $y'(t) = kCe^{kt} = ky$ . Therefore, we see that a solution of equation (3) is  $Q(t) = Ce^{kt}$ , (4) where  $C$  can be any constant. As in Example 1, the differential equation by itself does not completely specify the solution. But setting  $t = 0$  in (4) leads to  $Q(0) = C$ .
