Equipment Design Air stripping columns contain either trays or packing, depending on the application. Tray types include sieve, valve, and bubble cap. The geometry of the trays affects the extent and type of contact between the vapor and liquid streams. Downcomers channel the liquid flowing from one tray down to the tray below.

This handbook focuses on equipment design for refineries, modelling from an epidemiologic perspective. Vastly different conclusions can be reached, depending on how the data are derived and used. Furthermore, the models must be tested and validated with actual data. Finally, as with any epidemiological investigation, adequate control of confounding exposures is essential.
