B. Group first three terms together. C. Group last three terms together. BE SURE YOUR ANSWERS WILL NOT FACTOR FURTHER! All answers may be checked by multiplication.

Factoring Polynomials - Metropolitan Community College

Factoring quadratics with a common factor Our mission is to provide a free, world-class education to anyone, anywhere. Khan Academy is a 501(c)(3) nonprofit organization.

Factoring quadratics intro (practice) | Khan Academy

Example: Factor by grouping $x^3 + x^2 + 2x + 2$ We can group terms to give $x^3 + x^2$ and $2x + 2$. Then we can separately factor $x^3 + x^2$ and $2x + 2$. $x^3 + x^2$ can be factored to give $x^2(x + 1)$ and $2x + 2$ can be factored to give $2(x + 1)$ Then since $(x+1)$ is the common factor, it can be factored out.
