**Geopolitics: The Geography of International Relations**

Geopolitics is the study of the influences of geographical factors in politics and the relationships between different political actors, particularly sovereign states, as well as de-facto states and subnational geopolitical entities. Within the context of international relations, geopolitics provides a framework for studying foreign policy, as well as for explaining and predicting the behaviors of international political actors based on geographical variables.

**Geopolitics vs. Political Geography vs. International**—

We are talking therefore not only about the influence of natural givens on balances of power (what Anglo-American experts on international relations sometimes call |geopolitics|) but also about the territorial aspects of rivalries and the localization of forces present in a broad international context. Geographers (teachers of geography, at least) have very different ideas about their discipline and its raison d'être.

Geopolitics is the study of the effects of Earth's geography on politics and international relations. While geopolitics usually refers to countries and relations between them, it may also focus on two other kinds of states: de facto independent states with limited international recognition and relations between sub-national geopolitical entities, such as the federated states that make up a federation, confederation or a quasi-federal system. At the level of international relations, geopolitics i

**Lesson 4: Geopolitics — An Introduction to Historical**—

This volume examines geopolitics by looking at the interaction between geography, strategy and history. This book addresses three interrelated questions: why does the geographical scope of political objectives and subsequent strategy of states change? How do these changes occur? Over what period of time do these changes occur?
