The goal of transport policy is to make effective decisions concerning the allocation of transport resources, including the management and regulation of existing transportation activities. Thus, transport policy can be concomitantly a public and private endeavor. Still, governments are often the most involved in the policy process since they either own or manage many components of the transport system and have levels of jurisdiction on all existing transportation modes.

In the past few decades, the field of transportation has changed dramatically. Deregulation and greater reliance on markets and the private sector has helped to reconfigure the transport industries, while the rise of intermodal goods and global commerce has produced efficiencies of operation and a greater interdependence among transport modes. In a

In the last forty years or so the research field exploring the relationship between transport and development has developed rapidly. While sophistication in analysis has increased, understanding the effective integration of transport and development often remains poor in theory and in practice - with sometimes devastating effects. This Handbook provides a comprehensive analysis of both the current and emerging thinking in this field, drawing on multidisciplinary thinking in transport planning, transport, urban and spatial economics, and the wider social sciences. With 45 chapters from leading international authors, the book is organised around three main themes: urban structure and travel; transport and spatial impacts; wider dimensions in transport and development. The chapters each present commentary on key issues within these themes, presenting the debate on the impacts of urban structure on travel, the impacts of transport investment on development, and social and cultural change on travel. A multitude of competing inter-disciplinary perspectives are considered - leaving the reader with an invaluable comprehensive and critical understanding of the field. This major Handbook will serve as a guide for undergraduates and graduate students, researchers, consultants, and also practitioners and policy makers, wishing to find a comprehensive and original reference to research on transport and development.

This important Handbook reveals that most urban growth takes place in the less developed world and much of it represents over-urbanization that is, urbanization in which most migrants cannot effectively compete for employment, cannot find adequate shelter and do not have the means to feed themselves properly. Yet, compared to rural poverty, urban poverty is widely regarded as the lesser of the two evils. H.S. Geyer and his contributors highlight the enormous challenges posed by urbanization to decision makers at all levels of government. This final volume, in a series of three original reference works, covers four broad themes including: urban growth patterns; spatial issues; policy issues; and urban growth determinants. The chapters have been written not only for the advanced student and academics but also with undergraduate students in mind. The Handbook will appeal to scholars and researchers interested in international urban development issues.
