Course Notes - CS 162 - Formal Languages and Automata Theory.

The following documents outline the notes for the course CS 162 Formal Languages and Automata Theory. Much of this material is taken from notes for Jeffrey Ullman's

course, Introduction to Automata and Complexity Theory, at Stanford University. Note: Some of the notes are in PDF format.

Course Notes - CS 162 - Formal Languages and Automata Theory 1.1:introduction to

finite automata In this chapter we are going to study a class of machines called finite automata. Finite automata are computing devices that accept/recognize regular languages and are used to model operations of many systems we find in practice. Their operations can be

simulated by a very simple computer program.
