Make it easy to find the class library details that are essential to every .NET Framework developer—with four full-color posters. Created by .NET expert Jeffrey Richter, each poster includes an easy-to-scan class derivation hierarchy of the most useful types, a comprehensive list of value types, an interface cross-reference map, and an assembly cross-reference map. Keep them on your wall as quick references that you'll use again and again to find important class library details and relationships in the .NET Framework 2.0.

Provides guidance and code samples to develop kernel-mode or user-mode drivers with Windows Driver Foundation.

Provides information on programming 3D graphics using Windows Presentation Foundation 3D API.

Presenting cutting-edge insights from industry practitioners, .NET 4 for Enterprise Architects and Developers supplies in-depth coverage of the various server-side features of Microsoft .NET Framework 4 that can be leveraged in Enterprise Application development. It provides a fundamental understanding of the technical aspects of implementation and

Provides information on using Microsoft Language Integrated Query for data access.

Provides information on the tuning and optimization features of SQL server 2005, covering such topics as query execution, plan caching, and concurrency problems.

Brad Abrams was a founding member of both the Common Language Runtime and .NET Framework teams at Microsoft Corporation, where he is currently a lead program manager. Brad has been involved with the WinFX and Longhorn efforts from their beginning. His primary role is ensuring that the consistency and developer productivity of the .NET Framework continues throughout Longhorn and beyond.

This two volume set LNCS 9418 and LNCS 9419 constitutes the proceedings of the 16th International Conference on Web Information Systems Engineering, WISE 2015, held in Miami, FL, USA, in November 2015. The 53 full papers, 17 short and 14 special sessions and invited papers, presented in these proceedings were carefully reviewed and selected from 189 submissions. The papers cover the areas of big data techniques and applications, deep/hidden web, integration of web and internet, linked open data, semantic web, social network computing, social web and applications, social web models, analysis and mining, web-based applications, web-based business processes and web services, web data integration and mashups, web data models, web information retrieval, web privacy and security, web-based recommendations, and web search.

The modern world has made available a wealth of new possibilities for interacting with computers, through advanced Web applications, while on the go with handheld smart telephones or using electronic tabletops or wall-sized displays. Developers of modern interactive systems face great problems: how to design applications which will work well with newly available technologies, and how to efficiently and correctly implement such designs. Design, Specification and Verification of Interactive Systems 2009 was the 15th of a series of annual workshops devoted to helping designers and implementers of interactive systems unleash the power of modern interaction devices and techniques. DSV-IS 2009 was held at Queen's University in Kingston, Canada, during July 16-19, 2009. This book collects the best papers submitted to the workshop. There were 17 full papers, 10 late-breaking and experience report papers, and two demonstrations. Keynote presentations were provided by Judy Brown of Carleton University and Randy Ellis of Queen's University. The first day of the workshop addressed the problems of user interface evaluation and specification, with particular emphasis on the use of task models to provide hi-level approaches for capturing the intended functionality of a user interface. Day two continued this theme, examining techniques for modeling user interfaces, particularly for mobile and ubiquitous applications. Presenters also discussed advanced implementation techniques for interactive systems. Finally, day three considered how to architect interactive systems, and returned to the themes of evaluation and specification.

This two-volume set LNCS 4277/4278 constitutes the refereed proceedings of 14 international workshops held as part of OTM 2006 in Montpellier, France in October/November 2006. The 191 revised full papers presented were carefully reviewed and selected from a total of 493 submissions to the workshops. The first volume begins with 26 additional revised short or poster papers of the OTM 2006 main conferences.
