Christine Hünefeldt documents in impressive, moving detail the striving and ingenuity, the hard-won triumphs and bitter defeats of slaves who sought liberation in nineteenth-century urban Peru. Drawing on judicial, ecclesiastical, and notarial records—including the testimony of the slaves themselves—she uncovers the various strategies slaves invented to gain their freedom. Hünefeldt pays particular attention to marriage relations and family life. Slaves used their family solidarity as a strategy, while slaveowners used the conflicts within families to prevent manumission. The author's focus on gender relations between slaveowners and slaves, as well as between slaves, is particularly original. Her eye for ethnographic detail and her perceptive reading of the documentary evidence make this book a rich and important contribution to the study of slavery in Latin America. This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1994.

An overview of emerging topics, theories, methods, and practices in sonic interactive design, with a focus on the multisensory aspects of sonic experience. Sound is an integral part of every user experience but a neglected medium in design disciplines. Design of an artifact's sonic qualities is often limited to the shaping of functional, representational, and signaling roles of sound. The interdisciplinary field of sonic interaction design (SID) challenges these prevalent approaches by considering sound as an active medium that can enable novel sensory and social experiences through interactive technologies. This book offers an overview of the emerging SID research, discussing theories, methods, and practices, with a focus on the multisensory aspects of sonic experience. Sonic Interaction Design gathers contributions from scholars, artists, and designers working at the intersections of fields ranging from electronic music to cognitive science. They offer both theoretical considerations of key themes and case studies of products and systems created for such contexts as mobile music, sensorimotor learning, rehabilitation, and gaming. The goal is not only to extend the existing research and pedagogical approaches to SID but also to foster domains of practice for sound designers,
