Its unique approach covers the characteristics of semiconductor devices first, and then discusses the applications of these devices for power conversions. Well-written and easy-to-follow, the book features numerous worked-out examples that demonstrate the applications of conversion techniques in design and analysis of converter circuits.

Power Electronics is the subject that deals with the study of electronic circuits and devices but at high voltage or high power (i.e. at power level). i.e. Power Electronics = Electronics applied at Power-level. Some Power Electronics devices are: SEMICONDUCTOR BASED POWER ELECTRONICS DEVICES: Power Diodes, Power MOSFET, Thyristors, IGBTs, GTOs etc. Power Electronics Devices

Generally, power electronic devices based on the AlGa_N/Ga_N heterojunction structure have the following four advantages: (1) the 2DEG with high carrier density and high carrier mobility reduces the on-resistance of the device and hence the conductive loss of the power switch. (2) At the same output power, the device area is much smaller for Ga_N HEMT.
